BCG PLATINION

AI Hackathon

Future Leader Summit

HAMBURG, 09.-10.04.2026

Unlock preventive, personalised care through an AI-driven longevity journey

The client

A leading European healthcare group operating clinics, diagnostics centres, and home care services across nice countries.

Serving **~10 million patients** and generating **€3B+ revenue**, the client combines strong patient trust with access to rich health data.

However, decades of growth have created a fragmented system landscape:

- **Patient, lab, and care data remain siloed across systems**, with partially manual processes
- **As a result, a core asset remains untapped:** health data is not translated into personalised engagement or scalable digital revenue streams

Why now

The longevity economy is rapidly scaling, driven by structural shifts in demand and expectations:

- Healthcare is shifting from **episodic treatment to continuous prevention**
- Patients expect **personalised, digital-first,** always-on experiences

At the same time, the **competitive dynamic is accelerating**:

- Digital health platforms and retail players are capturing the patient interface through superior user experience
- They are already monetising preventive health demand via diagnostics, subscriptions, and supplements — **capturing high-margin revenue streams**

The problem

CEO mandate: launch a patient-facing longevity product within 12 months

Execution is constrained by three structural barriers:

Fragmented data: No unified patient profile across clinical and lifestyle data — limiting personalisation and targeted intervention

Capability gap: Organisation optimised for clinical delivery, not for building engaging, consumer-grade digital products

Competitive pressure: External players capture engagement, own data loops, and monetise preventive demand

Note: This scenario is hypothetical and only inspired by a realistic client setting

Your Mission (I/II)

	Conceptual Design	Working Prototype of a Longevity MVP
	Think like a BCG Platinion team who wants to collaborate with the client on the longevity journey. Before writing a line of code, **understand the patient, define the product, and design the system that makes it possible**	Build a **functional MVP** that a real patient could interact with. It must be grounded in your user story and demonstrate how the system turns fragmented health data into actionable longevity insights.
Must-Have	• A clearly defined **patient persona** with motivations, fears, and health goals • A mapped **longevity journey** from first awareness to daily engagement • At least **3 user stories** in "As a … I want … So that …" format grounding your prototype decisions • One clearly defined **north star metric** for patient success in year one	• An **AI health coach supporting the customer journey** with personal and evidence-grounded recommendations • **Risk and opportunity flagging** surfacing early warning signals with actionable interventions • **In-app touchpoints** surfacing relevant health checks, diagnostic packages, or nutritional offerings — commercial value without disrupting the care experience
Nice-To-Have	• What if your app knew you well enough to nudge you at exactly the right moment? • What if patients could actually see their future? • And whatever else you can imagine — this is your space to surprise us	

Note: This scenario is hypothetical and only inspired by a realistic client setting

Your Mission (II/II)

Data set & longevity dimensions are **for inspiration only and do not need to be used**

Datasets provided

Synthetic EHR Records
Patient records incl. diagnoses, medications, visit history (1,000 patients)

Wearable Telemetry
Resting heart rate, steps, sleep duration & quality, etc. (90-day history per patient)

Lifestyle Survey Data
Self-reported diet quality, exercise frequency, stress level, etc. per patient

Longevity dimensions to track

Exemplary

Biological Age
An estimate of physiological aging relative to chronological age, reflecting overall health and resilience

Cardiovascular Fitness
A measure of the efficiency and capacity of the heart and circulatory system to support physical activity and endurance

Sleep and Recovery Profiling
An assessment of the body's ability to rest, recover, and regenerate through sleep and recovery processes

Lifestyle & Behavioral Risk
An evaluation of everyday habits and behaviors that influence long-term health outcomes and risk exposure

Note: This scenario is hypothetical and only inspired by a realistic client setting
